

since 1920 valves with reliability

ALLIGATOR®

ALLIGATOR Express Valve UNIVERSAL

The UNIVERSAL-valve for all bicycles

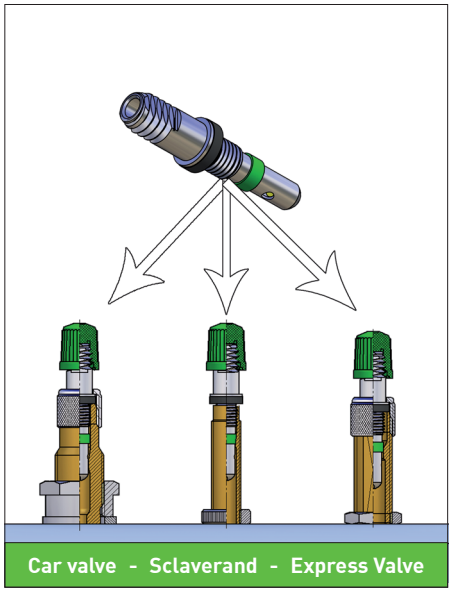

An end to the valve confusion. One valve for all types of bicycles.

ALLIGATOR, the inventor of the millionfold, tried and tested Express Valve, is once again turning the wheels of bicycle history.

The Swabian concern, rich in tradition, has developed a new valve which fits all bicycles – racing bikes and mountain bikes, too:

The ALLIGATOR Express Valve UNIVERSAL*.

Car valve - Sclaverand - Express Valve

Suitable for family needs and a match for the pressure in cycle racing

Just like the Express Valve, which has been established on the market for decades, its allpurpose 'brother' is also simple to insert, makes inflation easy using any standard pump, is highly reliable and extremely robust and durable.

The ingenious, two-step seal concept prevents the leakage of escaping air in the valve base. By means of the enhanced two-step cone seal, the **ALLIGATOR** Express Valve **UNIVERSAL** also withstands the racing bike pressure of 8 bar without a problem. The bursting pressure lies clearly over 25 bar. In icy cold and extreme heat, too, the **ALLIGATOR** Express Valve **UNIVERSAL** remains reliably tight.

The new, all-purpose, high-pressure valve core fits all commercially available valve stems, tubes and rim holes**.
And thus, **ALLIGATOR** puts an end to the confusion about which type of bicycle valve touse.

One valve – many winners

Bicycle manufacturers and the retail trade can reduce their procurement costs and their stocks of original equipment and spare parts considerably.

Cyclists are happy with its simplicity and reliability, and by buying an **ALLIGATOR** Express Valve **UNIVERSAL**, they always make the right choice – for every type of bicycle.

Article No. 11.1002

* commercial property rights have been applied for ** not suitable for Dunlop stem with side slits
